What is a Rain Barrel?

A rain barrel is a container that collects and stores rainwater from your roof that would otherwise be lost to runoff and diverted to storm drains and streams. This water is typically used to water plants, trees, shrubs and lawns.

What are the Advantages of a Rain Barrel?

Saves You Money
A rain barrel will save most homeowners about 1,300 gallons of water during the peak summer months. Saving water not only helps protect the environment, it saves you money and energy (decreased demand for treated tap water).

Helps Reduce Stormwater Pollution
Rainwater stored in rain barrels helps reduce the amount of stormwater runoff and the amount of pollutants that are picked up and carried to storm sewers, creeks and rivers.

Conserves Water Supply Resources
Lawn and garden watering make up nearly 40% of total household water use during the summer. Rainwater used from rain barrels helps reduce the amount of water used from underground aquifers.

Better for Plants and Gardens
Rainwater stored in rain barrels is a naturally soft water and devoid of minerals, chlorine, fluoride and other chemicals. For this reason, plants respond very well to rainwater. After all, it's what plants in the wild thrive on!

How to Install your Rain Barrel

- It is a good idea to put your barrel up on a flat, stable platform (concrete blocks, landscaping blocks or other solid support). The added height increases the water pressure and allows you to put a bucket under the spigot to bring water to your indoor plants. A full 55 gallon rain barrel weighs over 450 pounds.
- Install an overflow hose to direct water away from your house foundation for times of high rainfall.
- Locate and install your rain barrel to keep kids safe. Keep your rain barrel lid tight at all times to prevent children, animals and insects from entering or falling in.
- Measure and cut the downspout. Use the existing elbow or a flexible spout attachment to direct the water to the top of the rain barrel. The end of the downspout should be cut 6-8 inches above the top of the rain barrel. Downspouts can be cut with a hacksaw. Flexible spouts can be purchased at hardware stores or home centers.
- In the fall, you need to empty your rain barrel and then leave the valve (spigot) open. Remove the cap on the lower fitting. Leave the barrel in place and in the spring, just close the valve and install the cap.
- Diverters are available that can easily switch the downspout from filling the rain barrel to normal operation once the rain barrel is full.
- More questions on how to use rain barrels can be directed to **UpCycle Products at (815) 735-9583**.

Disclaimer

With proper installation, maintenance and use, your rain barrel should function properly. The Town of Merrillville assumes no liability for the installation, maintenance, property damage or injury associated with your rain barrel. Do not drink, cook or bathe with water from your rain barrel.
