

**When you're washing
your car in the driveway,
remember you're not just
washing your car in the
driveway.**

All the soap, scum and oily grit runs along the curb, then flows into the storm drain and directly into our lakes, streams and waterways. That causes pollution which is unhealthy for fish. So how do you avoid the whole mess? Easy. Wash your car on grass or gravel instead of the street. Or better yet, take it to a car wash where the water gets treated and recycled.

This project has been funded wholly or in part by the United States Environmental Protection Agency under assistance agreement 319 to the Indiana Department of Environmental Management. The contents of this document do not necessarily reflect the views and policies of the U.S. Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use. Also special thanks to N.Y. Long Island Sound Study and Washington State Department of Ecology for their collaboration.
