

**When you're fertilizing  
the lawn, remember  
you're not just  
fertilizing the lawn.**

**You fertilize the lawn. Then it rains. The rain washes the fertilizer along the curb, into the storm drain and directly into our lakes, streams and waterways. This causes algae to grow, which uses up oxygen that fish need to survive. So if you fertilize, please follow directions and use sparingly.**

This project has been funded wholly or in part by the United States Environmental Protection Agency under assistance agreement 319 to the Indiana Department of Environmental Management. The contents of this document do not necessarily reflect the views and policies of the U.S. Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use. Also special thanks to N.Y. Long Island Sound Study and Washington State Department of Ecology for their collaboration.
