

The Merrillville Stormwater Utility is inviting property owners and potential businesses to view the final draft of the Stormwater Utility Master Plan Inundation Maps.

The maps, prepared for the utility by Christopher Burke Engineering, contain flooding information on areas inundated after rain events, identify locations that require future attention and show flood storage areas that can be used for future detention.

The public is being invited to view the maps **through Friday, October 11**, and by appointment only, and provide their input or suggestions for areas that affect them.

To schedule an appointment or for further information, call the executive director, Matt Lake at the Stormwater Utility office at [\(219\) 472-8668](tel:2194728668). The Stormwater office is currently located in the Broadfield Center business complex at 9111 Broadway, Suite C, Merrillville.
